HOW TO CREATE GIT HUB ACCOUNT

- Go to github.com.
- Click "Sign up".
- Fill in your username, email, and password.
- Complete the CAPTCHA.
- Choose a plan (free is fine).
- Verify your email through the confirmation link.
- Log in and set up your profile.

The screenshot shows the GitHub sign-in interface. At the top is the GitHub logo. Below it, the text "Sign in to GitHub" is displayed. The main form contains two input fields: "Username or email address" and "Password", each with a key icon on the right. A "Forgot password?" link is positioned to the right of the password field. Below the inputs is a large green "Sign in" button. At the bottom of the form, there is a section with the text "Sign in with a passkey" and "New to GitHub? Create an account".

WHAT IS REPOSITORY

A GitHub repository is like a folder for your project, where you store files, track changes, and collaborate with others.

- Public/Private: Decide if everyone can see it or only specific people
- Collaborate: Multiple people can work on the project.
- Branching: Work on different versions (branches) of the project.

HOW TO CREATE REPOSITORY :

- Open GitHub and sign in.
- Create New Repository:
- Click the "+" icon (top-right) and select "New repository".
- Fill in Details:
- Repository Name: Enter a name.
- Choose Public or Private.
- Optionally, initialize with README or .gitignore.
- Create:
- Click "Create repository".

WHAT IS README.md

A README file in GitHub is a markdown file (README.md) that provides essential information about a repository. It serves as an guide for users and contributors, explain about project

- Project Overview: What the project does.
- Installation: How to set it up.
- Usage: Instructions for using the project.
- Contributing: Guidelines for contributing.
